

Course: Business Statistics (20116)  
Term: Winter term 2012  
Examiner: PD Dr. Annette Kirstein  
Date: 06.02.2013

# Final Examination

First name: .....

Last name: .....

Matriculation number:  
(up to 9 digits) \_\_\_\_\_

Available time: 60 minutes

Maximum points: 60 points

**Permitted aid(s):**

- Non-programmable pocket calculator *without data storage and communication capabilities*
- Formula Sheet, individually printed at home and brought to the final exam (4 pages formulas + 5 pages distribution tables), **no further notes (handwritten or printed) allowed on the Formula Sheet!**

**General information:**

1. There are 20 questions all together. In all questions *one out of four* answers is correct.
2. In each question points are given as follows:  
If you mark only correct: points cf.problem  
If you mark only wrong: 0 points  
If you mark correct and wrong / nothing: 0 points
3. Feel free to use the empty space on the present exam for your personal calculations or notes. But note that *whatever you write on these pages will be ignored during correction! Only the answer sheet will be evaluated.*
4. Points given for correct solutions correspond to the processing time assigned (in minutes).
5. **Return all the paper you received or used (without exception).**

**GOOD LUCK!**

1. **Data and Statistics. (2 points)** In a sample of 1,600 registered voters, 912, or 57%, approve of the way the President is doing his job. A political pollster states: "Fifty-seven percent of all voters approve of the President." This statement is an example of
  - a sample
  - descriptive statistics
  - statistical inference
  - a population
2. **Data and Statistics. (2 points)** A survey to collect data on the entire population is
  - a census
  - a sample
  - a population
  - an inference
3. **Descriptive Statistics. (2 points)** In a cumulative absolute frequency distribution, the last class will always have a cumulative frequency equal to
  - one
  - 100%
  - the total number of elements in the data set
  - zero
4. **Descriptive Statistics. (2 points)** The 50th percentile is the
  - mode
  - median
  - mean
  - third quartile
5. **Probabilities. (2 points)** If a six sided die is tossed two times and "3" shows up both times, the probability of "3" on the third trial is
  - 1/2
  - 1/3
  - 1/6
  - 1/216
6. **Probabilities. (4 Points)** On a December day, the probability of snow is .30. The probability of a "cold" day is .50. The probability of snow and "cold" weather is .15. Are snow and "cold" weather independent events?
  - only if given that it snowed
  - only when they are also mutually exclusive
  - no
  - yes
7. **Probabilities. (4 points)** If X and Y are mutually exclusive events with  $P(X) = 0.295$ ,  $P(Y) = 0.32$ , then  $P(X | Y) =$ 
  - 0.0944
  - 0.6150
  - 1.0000
  - 0.0000

8. **Probability distributions. (2 points)** Which of the following is **not** a required condition for a discrete probability function?
- $f(x) \geq 0$  for all values of  $x$
  - $\sum f(x) = 1$
  - $\sum f(x) = 0$
  - $f(x) \leq 1$
9. **Binomial probability. (4 points)** A production process produces 2% defective parts. A sample of five parts from the production process is selected. What is the probability that the sample contains exactly two defective parts?
- 0.0004
  - 0.0038
  - 0.10
  - 0.02
10. **Continuous uniform distribution. (4 points)** The random variable  $x$  is known to be uniformly distributed between 70 and 90. The probability of  $x$  having a value between 80 to 95 is
- 0.75
  - 0.5
  - 0.05
  - 1
11. **Sampling. (2 points)** As the sample size increases, the
- standard deviation of the population decreases
  - population mean increases
  - standard error of the sample mean decreases
  - standard error of the sample mean increases
12. **Sampling. (4 points)** A simple random sample of 64 observations was taken from a very large population. The sample mean and the standard deviation were determined to be 320 and 120 respectively. The standard error of the sample mean is
- 1.875
  - 40
  - 5
  - 15
13. **Interval Estimation. (4 points)** From a population with a variance of 900, a sample of 225 items is selected. At 95% confidence, the margin of error is
- 15
  - 2
  - 3.92
  - 4
14. **Hypothesis tests. (2 points)** In hypothesis testing if the null hypothesis has been rejected when the alternative hypothesis has been true,
- a Type I error has been committed
  - a Type II error has been committed
  - either a Type I or Type II error has been committed
  - the correct decision has been made

15. **Hypothesis test on population mean. (4 points)** The manager of a store has taken a random sample of 100 customers. The average length of time it took the customers in the sample to check out was 3.1 minutes with a standard deviation of 0.5 minutes. We want to test if the mean waiting time of all customers is significantly more than 3 minutes. At 95% confidence, it can be concluded that the mean of the population is
- significantly greater than 3
  - not significantly greater than 3
  - significantly less than 3
  - significantly greater than 3.18
16. **Inferences about a population variance. (4 points)** A random sample of 31 charge sales showed a sample standard deviation of \$50. A 90% confidence interval estimate of the population standard deviation is
- 1,715.10 to 4,055.68
  - 1,596.45 to 4,466.73
  - 39.96 to 66.83
  - 41.39 to 63.68
17. **ANOVA. (4 points)**  $SSTR = 6,750$        $H_0: \mu_1=\mu_2=\mu_3=\mu_4$   
 $SSE = 8,000$        $H_a: \text{at least one mean is different}$   
 $n_T = 20$
- The mean square between treatments (MSTR) equals
- 400
  - 500
  - 1,687.5
  - 2,250
18. **Simple linear regression. (2 points)** If the coefficient of determination is 0.9, the percentage of variation in the dependent variable explained by the variation in the independent variable
- is 0.90%
  - is 90%.
  - is 0.81%
  - can be any positive value
19. **Simple linear regression. (4 points)** You are given the following information.
- |                                 |   |   |   |    |
|---------------------------------|---|---|---|----|
| <b>Dependent Variable (y)</b>   | 5 | 7 | 9 | 11 |
| <b>Independent Variable (x)</b> | 4 | 6 | 2 | 4  |
- The least squares estimate of  $b_0$  equals
- 10
  - 10
  - 0.5
  - 0.5
20. **Non-parametric tests. (2 points)** A nonparametric version of the Parametric analysis of variance test is the
- Kruskal-Wallis Test
  - Mann-Whitney-Wilcoxon Test
  - sign test
  - Wilcoxon Signed-rank test

## 1 Descriptive Statistics: Numerical measures

### 1.1 Measures of location

- Sample mean:  $\bar{x} = \frac{\sum x_i}{n}$

$$\text{Population mean: } \mu = \frac{\sum x_i}{N}$$

### 1.2 Measures of variability

- Sample variance:  $s^2 = \frac{\sum (x_i - \bar{x})^2}{n-1}$
- Sample standard deviation:  $s = \sqrt{s^2}$
- Coefficient of variation:  $\frac{\text{standard deviation}}{\text{mean}} \cdot 100\%$
- z-score:  $z_i = \frac{x_i - \bar{x}}{s}$
- Chebyshev's theorem:  
a fraction of at least  $(1 - \frac{1}{z^2})$  of the items in any data set will be within  $z$  standard deviations of the mean (for all  $z > 1$ )

$$\text{Population variance: } \sigma^2 = \frac{\sum (x_i - \mu)^2}{N}$$

$$\text{Population standard deviation: } \sigma = \sqrt{\sigma^2}$$

### 1.3 Measures of association

- Sample covariance:  $s_{xy} = \frac{\sum (x_i - \bar{x})(y_i - \bar{y})}{n-1}$
- Sample correlation:  $r_{xy} = \frac{s_{xy}}{s_x s_y}$

$$\text{Population covariance: } \sigma_{xy} = \frac{\sum (x_i - \mu_x)(y_i - \mu_y)}{N}$$

$$\text{Population correlation: } \rho_{xy} = \frac{\sigma_{xy}}{\sigma_x \sigma_y}$$

## 2 Probabilities: Combination and Permutation

- Combination:  $C_n^N = \binom{N}{n} = \frac{N!}{n!(N-n)!}$
- Permutation:  $P_n^N = n! \binom{N}{n} = \frac{N!}{(N-n)!}$

## 3 Probability Distributions

### 3.1 Discrete Probability Distributions

Discrete uniform probability distribution:  $p(x) = \frac{1}{n}$

- Expected value (Mean):  $E(x) = \mu = \sum x p(x)$
- Variance:  $Var(x) = \sigma^2 = \sum (x - \mu)^2 p(x)$

Binomial distribution:  $p(x) = \binom{n}{x} \pi^x (1 - \pi)^{n-x}$  with  $\binom{n}{x} = \frac{n!}{x!(n-x)!}$

- Expected value:  $E(x) = \mu = n\pi$
- Variance:  $Var(x) = \sigma^2 = n\pi(1 - \pi)$
- Normal approximation:  $\mu = n\pi$  and  $\sigma = \sqrt{n\pi(1 - \pi)}$

Poisson distribution:  $p(x) = \frac{\mu^x e^{-\mu}}{x!}$

- Expected value = Variance:  $E(x) = \mu = \sigma^2 = Var(x)$

Hypergeometric distribution:  $p(x) = \frac{\binom{r}{x} \binom{N-r}{n-x}}{\binom{N}{n}}$  for  $0 \leq x \leq r$

- Expected value:  $E(x) = \mu = n \frac{r}{N}$
- Variance:  $Var(x) = \sigma^2 = n \frac{r}{N} \left(1 - \frac{r}{N}\right) \left(\frac{N-n}{N-1}\right)$
- Binomial approximation:  $p = \frac{r}{N}$

### 3.2 Continuous Probability Distributions

**Uniform probability distribution:**  $f(x) = \frac{1}{b-a}$  for  $a \leq x \leq b$  and  $f(x) = 0$  elsewhere

- Expected value:  $E(x) = \frac{a+b}{2}$
- Variance:  $Var(x) = \frac{(b-a)^2}{12}$

**Normal probability distribution:**  $f(x) = \frac{1}{\sigma\sqrt{2\pi}} e^{-\frac{(x-\mu)^2}{2\sigma^2}}$

**Standard normal probability distribution:**  $f(x) = \frac{1}{\sqrt{2\pi}} e^{-\frac{x^2}{2}}$

- $z$ -transformation:  $z = \frac{x-\mu}{\sigma}$

**Exponential probability distribution:**  $f(x) = \frac{1}{\mu} e^{-\frac{x}{\mu}}$  for  $x \geq 0$  and  $\mu > 0$

- Cumulative probabilities (up to  $x_0$ ):  $P(x \leq x_0) = 1 - e^{-\frac{x_0}{\mu}}$
- Mean  $\mu$  = Standard deviation  $\sigma$

## 4 Statistical Inference

### 4.1 Sampling and sampling distributions

**Sampling distribution of the sample mean  $\bar{x}$**

- Expected value:  $E(\bar{x}) = \mu$
- Standard error of the sample mean (finite population):  $\sigma_{\bar{x}} = \frac{\sigma}{\sqrt{n}} \sqrt{\frac{N-n}{N-1}}$
- Standard error of the sample mean (infinite population, or infinite population if  $\frac{n}{N} \leq 0.05$ ):  $\sigma_{\bar{x}} = \frac{\sigma}{\sqrt{n}}$

### 4.2 Interval Estimation

**Interval estimation of the population mean ( $\sigma$  known):**

- Margin of error  $E = z_{\alpha/2} \frac{\sigma}{\sqrt{n}}$
- Necessary sample size for a specific  $E$ :  $n = (z_{\alpha/2})^2 \frac{\sigma^2}{E^2}$

**When  $\sigma$  is unknown:** use  $t$  distribution-values with  $n - 1$  degrees of freedom, and sample standard deviation  $s$

### 4.3 Statistical Inferences About a Population Mean

- Test statistic if  $\sigma$  known:  $z = \frac{\bar{x} - \mu_0}{\frac{\sigma}{\sqrt{n}}}$
- Test statistic if  $\sigma$  unknown:  $t = \frac{\bar{x} - \mu_0}{\frac{s}{\sqrt{n}}}$  (with  $n - 1$  degrees of freedom)

### 4.4 Statistical Inference About Means With Two Populations

- Expected value  $E(\bar{x}_1 - \bar{x}_2) = \mu_1 - \mu_2$
- Standard deviation (standard error)  $\sigma_{\bar{x}_1 - \bar{x}_2} = \sqrt{\frac{\sigma_1^2}{n_1} + \frac{\sigma_2^2}{n_2}}$
- Interval estimate:  $\bar{x}_1 - \bar{x}_2 \pm z_{\alpha/2} \sqrt{\frac{\sigma_1^2}{n_1} + \frac{\sigma_2^2}{n_2}}$
- Test statistic:  $z = \frac{(\bar{x}_1 - \bar{x}_2) - D_0}{\sqrt{\frac{\sigma_1^2}{n_1} + \frac{\sigma_2^2}{n_2}}}$
- if  $\sigma_1$  and  $\sigma_2$  are unknown use the  $s_1$  and  $s_2$  of the samples as estimates and use  $t$ -values instead of  $z$ -values
  - Degrees of freedom:  $df = \frac{\left(\frac{s_1^2}{n_1} + \frac{s_2^2}{n_2}\right)^2}{\frac{1}{n_1-1}\left(\frac{s_1^2}{n_1}\right)^2 + \frac{1}{n_2-1}\left(\frac{s_2^2}{n_2}\right)^2}$
- if samples are matched:
  - Test statistic:  $t = \frac{\bar{d} - \mu_d}{\frac{s_d}{\sqrt{n}}}$  with  $\bar{d} = \sum_n d_i$  and  $s_d = \sqrt{\sum \frac{(d_i - \bar{d})^2}{n-1}}$

## 4.5 Inference About a Population Variance

- Interval estimate of  $\sigma$ :  $\sqrt{\frac{(n-1)s^2}{\chi^2_{\frac{\alpha}{2}}}} \leq \sigma \leq \sqrt{\frac{(n-1)s^2}{\chi^2_{(1-\frac{\alpha}{2})}}}$
- Test statistic:  $\chi^2 = \frac{(n-1)s^2}{\sigma_0^2}$  (with  $n - 1$  degrees of freedom)

## 4.6 Inference About the Variances of Two populations

- Test statistic  $F = \frac{s_1^2}{s_2^2}$  (with  $df$  numerator =  $n_1 - 1$  and  $df$  denominator =  $n_2 - 1$  where index 1 denotes the population with the larger sample variance)

## 4.7 Goodness of fit test: Multinomial Population

- Test statistic:  $\chi^2 = \sum_{i=1}^k \frac{(f_i - e_i)^2}{e_i}$  (with  $k - 1$  degrees of freedom)

## 4.8 Test of Independence

- Test statistic:  $\chi^2 = \sum_i \sum_j \frac{(f_{ij} - e_{ij})^2}{e_{ij}}$  (with  $(n - 1)(m - 1)$  degrees of freedom)

## 4.9 Goodness of fit test: Poisson Distribution

- Test statistic:  $\chi^2 = \sum_{i=1}^k \frac{(f_i - e_i)^2}{e_i}$  (with  $k - 2$  degrees of freedom)  
where  $e_i = np(x)$ , and  $p(x) = \frac{\mu^x e^{-\mu}}{x!}$

## 4.10 Goodness of Fit Test: Normal Distribution

- Test statistic:  $\chi^2 = \sum_{i=1}^k \frac{(f_i - e_i)^2}{e_i}$  (with  $k - 3$  degrees of freedom)

## 5 Analysis of Variance

### 5.1 Basics

- Between-treatments estimate of  $\sigma^2$ :  $MSTR = \frac{SSTR}{k-1}$  where  $SSTR = \sum_{j=1}^k n_j (\bar{x}_j - \bar{\bar{x}})^2$
- Within-treatments estimate of  $\sigma^2$ :  $MSE = \frac{SSE}{n_T - k}$  where  $SSE = \sum_{j=1}^k (n_j - 1)s_j^2$
- Test statistic:  $F = \frac{MSTR}{MSE}$  (with  $k - 1$  d.f. for the nominator and  $n_T - k$  d.f. for the denominator)
- Total sum of squares  $SST = \sum_{j=1}^k \sum_{i=1}^{n_j} (x_{ij} - \bar{x}_j)^2 = SSTR + SSE$

### 5.2 Fisher's Least Significant Difference

- Test statistic:  $t = \sqrt{\frac{\bar{x}_i - \bar{x}_j}{MSE \left( \frac{1}{n_i} + \frac{1}{n_j} \right)}}$  (with  $n_T - k$  d.f.)
- Reformulated test statistic:  $\bar{x}_i - \bar{x}_j$ , reject  $H_0$  if  $|\bar{x}_i - \bar{x}_j| > LSD$  where  $LSD = t_{\frac{\alpha}{2}} \sqrt{MSE \left( \frac{1}{n_i} + \frac{1}{n_j} \right)}$

## 6 Simple Linear Regression

Regression model:  $y = \beta_0 + \beta_1 x + \epsilon$

Regression equation:  $E(y) = \beta_0 + \beta_1 x$

Estimated regression equation:  $\hat{y} = b_0 + b_1 x$

Least squares criterion:  $\min \sum (y_i - \hat{y}_i)^2$

- slope:  $b_1 = \frac{\sum (x_i - \bar{x})(y_i - \bar{y})}{\sum (x_i - \bar{x})^2}$
- $y$ -intercept:  $b_0 = \bar{y} - b_1 \bar{x}$

Coefficient of determination:  $r^2 = \frac{SSR}{SST}$

- $SST = SSR + SSE \rightarrow \sum(y_i - \bar{y})^2 = \sum(\hat{y}_i - \bar{y})^2 + \sum(y_i - \hat{y}_i)^2$
- Sample correlation coefficient:  $r_{xy} = (\text{sign of } b_1) \sqrt{r^2}$

Testing for Significance of  $b_1$  (t test):

- Estimate of  $\sigma^2$ :  $MSE = s^2 = \frac{SSE}{n-2}$  where  $SSE = \sum(y_i - \hat{y}_i)^2 = \sum(y_i - b_0 - b_1 x_i)^2$
- Test statistic:  $t = \frac{b_1}{s_{b_1}}$  (with  $n - 2$  d.f. and  $s_{b_1} = \frac{s}{\sqrt{\sum(x_i - \bar{x})^2}}$ )

Confidence interval for  $\beta_1$ :  $b_1 \pm t_{\alpha/2} s_{b_1}$

Testing for Significance of  $b_1$  (F-test):

- Estimate of  $\sigma^2$ :  $MSR = \frac{SSR}{\text{Number of independent variables}}$
- Test statistic:  $F = \frac{MSR}{MSE}$  (with 1 d.f. in the numerator and  $n - 2$  d.f. in the denominator)

## 7 Non-Parametric Methods

### 7.1 Sign Test

- Small-sample case ( $n \leq 20$ ):
  - Test statistic: number of plus signs according to a binomial distribution with  $\pi = 0.5$
- Large-sample case: ( $n > 20$ ):
  - The binomial distribution can be approximated by a normal distribution with  $\mu = 0.5n$  and  $\sigma = \sqrt{0.25n}$
  - Test statistic:  $z = \frac{x - \mu}{\sigma}$

### 7.2 Wilcoxon Signed-Rank Test

- Test statistic:  $z = \frac{T - \mu_T}{\sigma_T}$  with  $\mu_T = 0$  and  $\sigma_T = \sqrt{\frac{n(n+1)(2n+1)}{6}}$

### 7.3 Mann-Whitney-Wilcoxon Test

- Test statistic:  $z = \frac{T - \mu_T}{\sigma_T}$  with  $\mu_T = 0.5n_1(n_1 + n_2 + 1)$  and  $\sigma_T = \sqrt{\frac{1}{12}n_1 n_2 (n_1 + n_2 + 1)}$

### 7.4 Kruskal-Wallis test

- Test statistic:  $W = \left[ \frac{12}{n_T(n_T+1)} \sum_{i=1}^k \frac{R_i^2}{n_i} \right] - 3(n_T + 1)$
- When populations are identical the sampling distribution of the test statistic  $W$  can be approximated by a chi-squared distribution (with  $k - 1$  d.f.) if  $n_i \geq 5$  for all samples

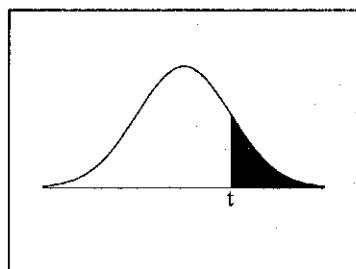

### 7.5 Spearman Rank-Correlation Coefficient $r_s$

- $r_s = 1 - \frac{6 \sum d_i^2}{n(n^2-1)}$
- Test statistic:  $z = \frac{r_s - \mu_r}{\sigma_r}$  where  $\mu_r = 0$  and  $\sigma_r = \sqrt{\frac{1}{n-1}}$

Table 1: Table of the Standard Normal Cumulative Distribution Function  $\Phi(z)$

## F distribution critical value landmarks

Table entries are critical values for  $F^*$   
with probably  $p$  in right tail of the  
distribution.

Figure of  $F$  distribution (like in Moore, 2004, p. 656)  
here.

		Degrees of freedom in numerator (df1)										
		1	2	3	4	5	6	7	8	12	24	1000
